Agenda

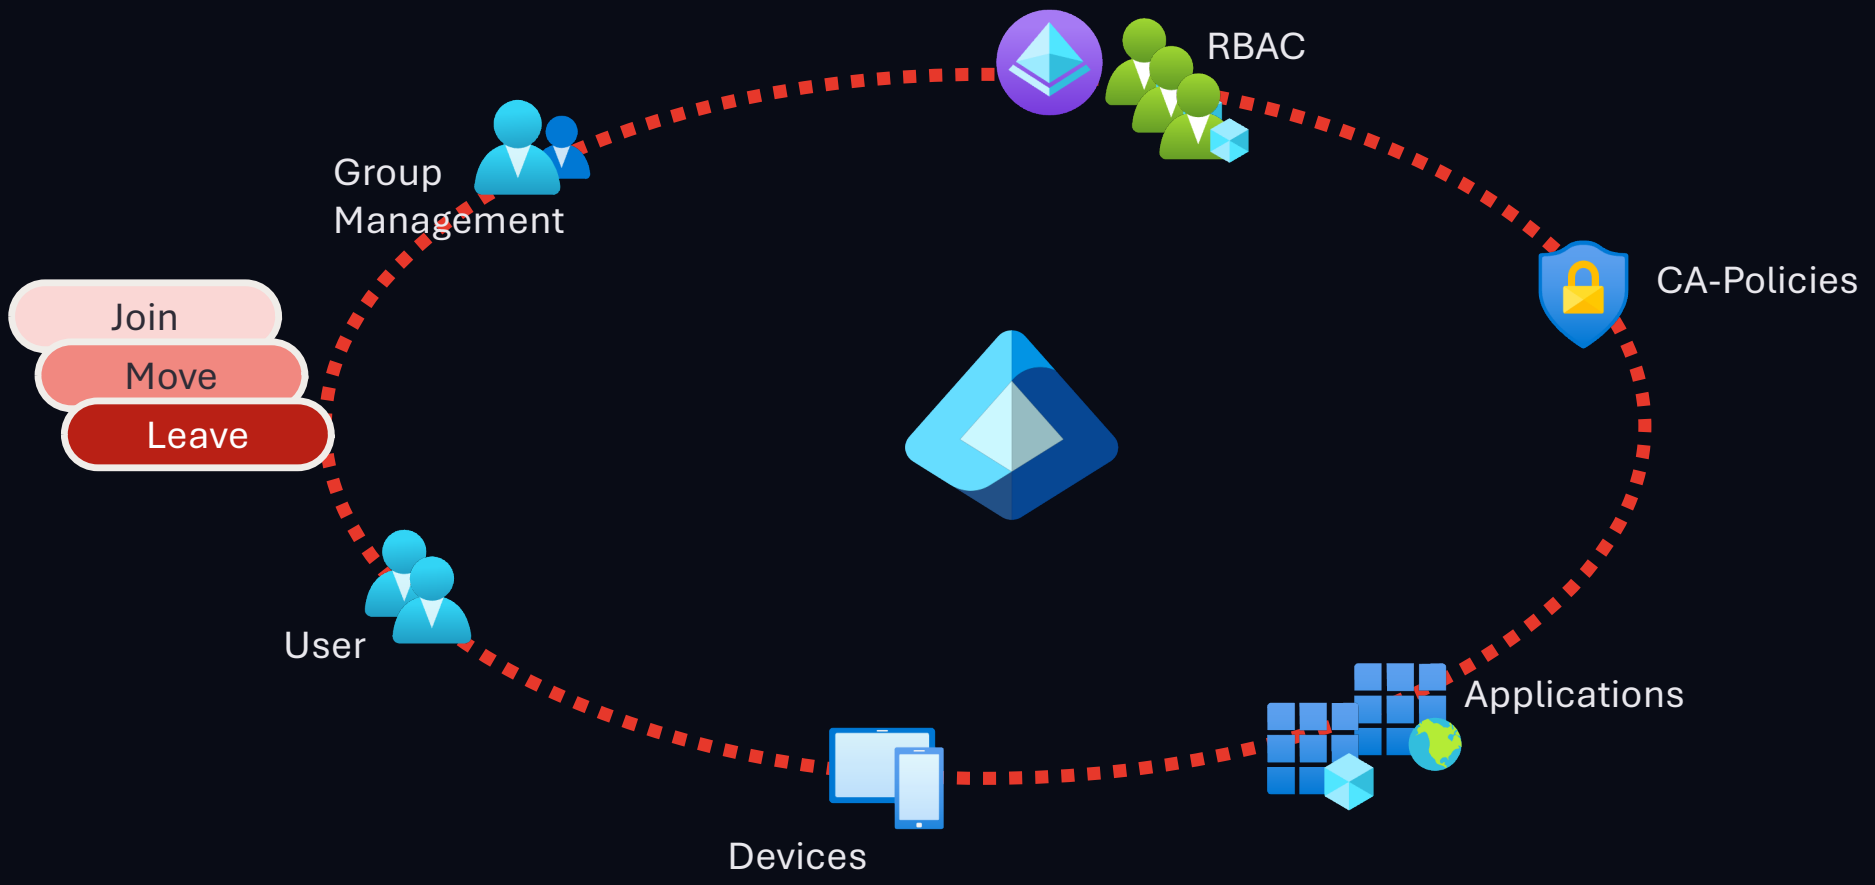

If you don’t clean up your tenant,
someone else might do it for you

- The Causes
  Where and how does tenant clutter arise?
- Tools for Housekeeping
  How do I identify what is stale?
- AI-assisted Housekeeping –
  what's actually useful?

See this symbol?
Referenced Blog Articles exist

How and where does tenant clutter arise?

Does this user still need an account?

WORKPLACE NINJA SUMMIT

Characteristics / Risks:

- Quickly created, bypassing standard processes
- Manager or other company attributes empty
- No MFA method
- Does this user still own resources or manage employees?

Actions:

- ✓ Entra Admin Center
- ✓ Registered Authentication Methods
- ✓ lastSignInDateTime / PS

- ✓ Lifecycle Workflows
- ✗ Access Reviews (rather not)

Demo

I WANT YOU
To control of
Guest Accounts

Is the guest account still needed?

WORKPLACE NINJA SUMMIT

Characteristics / Risks:

- Invitations can happen in many ways
- Without a lifecycle process, immortal
- Source of truth (management) in another Tenant
- Admin roles assigned
- Sponsor attribute

Actions:

- ✓ Check Guest (Tenant) Settings
- ✓ Who is allowed to invite?
- ✓ Governance – View Inactive Guests
- ✓ Lifecycle Workflows
- ✓ Access Reviews! 👍

Demo

Security Copilot for Housekeeping?

A1 | Policy Name

	A	B	C	D	E
1	**Policy Name**	**Issue Type**	**Enabled**	**Target Users/Groups/Apps**	**Details**
2	CA003-Global-BaseProtection-AllApps-AnyPlatform-MFA	Overly Broad	Yes	All users (except 2), all apps (except 1 group)	Applies MFA to nearly all users and apps; may be too broad if more specific policies exist.
3	CA003-Global-BaseProtection-AllApps-AnyPlatform-MFA COPP	Redundant/Disabled	No	All users (except 3), all apps (except 1 group)	Disabled duplicate/variant of above; may clutter policy list.
4	CA132-Mulder-ProtectedAction-DeletedItems	Redundant	Yes	2 specific users, authentication context c1	Nearly identical to "CA132-Mulder-ProtectedAction-DeletedItemsImported COPY"; both target same users/apps.
5	CA132-Mulder-ProtectedAction-DeletedItemsImported COPY	Redundant	Yes	2 specific users, authentication context c1	Duplicate of above; both enabled, same users/apps, same controls.
6	CA950 - Do Nothing	Not Applied	Yes	1 group, no apps	Targets a group but no applications; policy has no effect.
7	CA999-SalesForce Phishing Resistant MFA	Not Applied*	Yes	1 group, Salesforce app	If group is empty, policy is ineffective.
8	CA008-Global-IdentityProtection-UserRiskHigh-ChangePW	Overly Broad	Yes	All users (except 2), all apps (except 1 group), user risk "low"	Triggers on "low" user risk for all users/apps; typically set for "high" risk only.
9	CA004-Global-EntraTerms-AllApps-AnyPlatform-ToU xxx	Disabled/Clutter	No	Not specified	Disabled, may clutter policy list.
10	CA116-Admins-ProtectedAction-DeleteCAPolicies-Grant-OnlyGA	Disabled/Clutter	No	Not specified	Disabled, may clutter policy list.
11	CA101-Klaus-BaseProtection-AllApps-AnyPlatform-SignInFreqNonPersistent	Disabled/Clutter	No	Not specified	Disabled, may clutter policy list.
12	CA002-Global-BaseProtection-AllApps-AnyPlatform-SessionLifetime12hrs	Disabled/Clutter	No	Not specified	Disabled, may clutter policy list.
13	CA888 - Block Langley from Admin Portals	Disabled/Clutter	No	Not specified	Disabled, may clutter policy list.
14	CA132-Mulder-ProtectedAction-DeletedItemsImported COPY (disabled)	Disabled/Clutter	No	Not specified	Disabled, may clutter policy list.
15	CA116-Admins-ProtectedAction-DeleteCAPolicies-Grant-OnlyGA COPY	Disabled/Clutter	No	Not specified	Disabled, may clutter policy list.
16	CA001-Global-BaseProtection-AllApps-AnyPlatform-BlockNonPersonass	Disabled/Clutter	No	Not specified	Disabled, may clutter policy list.

Security Copilot for Housekeeping?

Eligible Microsoft 365 E5 and E7 customers receive
400 SCUs per month per 1,000 paid user licenses, up to 10,000 SCUs per month

Example 1:
An organization with 400 seats receives 160 SCUs/month

Example 2:
An organization with 4,000 seats receives 1,600 SCUs/month.

MCP Server for Enterprise

WORKPLACE NINJA SUMMIT

- Extend your AI Client to Entra ID for Natural Language Prompting
- No additional license required for MCP Server for Enterprise itself
- Use read-only permissions for discovery and reporting
- Check out Merill Fernando‘s Lokka Project / or Ugur Koc Developments
- Additional considerations, setup instructions and additional aspect in my blog post

MCP Server for Enterprise

Can you check CA Policies if there a overlapping settings, misconfigs, empty policies etc?

Used MCP Server for Entra Partner Lab integration, loaded tools >

Now let me fetch the full details of each policy to do a thorough analysis:

Used MCP Server for Entra Partner Lab integration >

I now have all the data I need. Here's a thorough analysis:

🔍 Conditional Access Policy Audit

You have **5 policies** total. Here's what I found:

✅ Healthy Policies

CA02-All:MFA-AdminAccounts and **CA03-All:MFA-UserAccounts** are well-structured and complementary. CA02 targets 12 admin roles, CA03 targets all users — together they provide MFA coverage. Both correctly exclude the same break-glass group (`1394bdc7...`).

CA01-All: SessionLifetime12h-AllUser enforces session controls (sign-in frequency: 16h, persistent browser: never) for all users. Note: The name says "12h" but the configured value is **16 hours** — a naming inconsistency worth fixing.

⚠️ Issues Found

1. 🔴 Overlap — Admins get MFA twice

CA02 targets admin roles with MFA. **CA03** targets **All users** with MFA. Since admins are also users, every admin account is covered by *both* policies simultaneously. This isn't necessarily harmful (MFA is still just MFA), but it's redundant and adds evaluation overhead. You should either:

- Exclude admin roles from CA03, or
- Consolidate into a single MFA policy with "All users" scope.

This looks like it may have been created for a specific workflow (step-up auth via authentication context). The naming is confusing and it has **never been modified** since creation (April 2025). Recommend reviewing whether this is intentional and renaming it to reflect its actual purpose (e.g., `CA04-GlobalAdmins:MFA-AuthContext-c1`).

4. 🟡 Session Policy Has No Grant Control

CA01 has `grantControls: null` — it only enforces session lifetime but doesn't require MFA or any other access requirement as a precondition. This is architecturally fine (session policies often stand alone), but means a user could have a long-lived session established without step-up. Evaluate whether adding a compliant device or MFA grant would be appropriate.

5. 🟡 Naming Inconsistency in CA01

Policy name says **"SessionLifetime12h"** but `signInFrequency.value` is **16 hours**. Low severity but misleading for operators.

📋 Summary Table

Policy	State	Issue
CA01 - SessionLifetime12h-AllUser	✅ Enabled	Name says 12h, config is 16h
CA02 - MFA-AdminAccounts	✅ Enabled	Overlaps with CA03 (admins are also "All users")
CA03 - MFA-UserAccounts	✅ Enabled	Overlaps with CA02
AllowDeletedItems	⚠️ Enabled	Confusing name, auth context scope, needs review
test	🔴 Report-only	Empty policy — targets no users, no apps. Delete it.

Recommended Actions

1. **Delete or reconfigure** the `test` policy immediately.
2. **Rename** `AllowDeletedItems` to something meaningful and document its intent.
3. **Fix the name** of CA01 to reflect the actual 16h sign-in frequency.
4. **Consider excluding admin roles** from CA03 to eliminate the MFA overlap, keeping the policies clean and non-redundant.
5. **Review CA01** to decide if a grant control (e.g., compliant device) should accompany session enforcement.

Takeaways – Housekeeping Principles

WORKPLACE NINJA SUMMIT

- ✓ No recent activity is a reason to investigate, not a reason to delete
- ✓ An owner field is not enough, someone must actively take responsibility
- ✓ Users, guests, groups, and service principals need different inactivity criteria
- ✓ Prefer reversible remediation before permanent deletion

❖ **Housekeeping is not a project – it is a process** ❖
